FAQ

3 Choose Utilities RAID Utility For the first time ever, you can use SoftRAID on your Mac and your PC.. Continue installing OS X to the destination drive (RAID Volume) you just created.. 1 Start up your computer using the Mac OS X or Mac OS X Server installation disc that comes with the computer.

The one we are focusing on is RAID 1 or “mirroring” Heres how to easily make the change over to RAID 1:Note:These directions are not intended for OS X 10.. You can open Disk Utility and click into the RAID volume and use the rebuild button under the RAID tab to kick off the rebuild process.. SoftRAID Lite for Mac and Windows brings incredible speed, security, and shareable cross-platform RAID access to macOS and Windows.

7 Lion First things first We have no DVD drive in a Mac mini Server You can easily remedy this by using a USB DVD drive (hold down “C” while turning your mini on).. However, it does not replace a standard backup policy! You mirror the drives by setting up a software RAID. [Mac Os X Cursor For Windows 7 Download](#)

* Create a standard Mac OS Extended Journaled volume Apply your changes and exit the Disk Utility.. The other option is to use another computer's DVD drive To do that, follow the steps in the Apple Knowledge Base Article link below.. Use the RAID tab and drag both drives over to create a new mirrored set Warning, you will lose any data on these drives.. 2 When the Installer opens, choose your language and click the Next button to see the Utilities menu at the top of the screen.. See the following Apple Knowledge Base Article for details more details [appleKB]HT2559[/appleKB]Important! Monitoring the status of your RAID is important.. We want to boot off the OS X Server disk that was included with the mini [appleKB]HT2129[/appleKB]Once we've booted the OS X Server disk and selected your language, you'll want to use the Disk Utility program under the Utilities menu.. We offer a discount to our customers to purchase RAID Monitor 3*Update: If you are brave and your data is backed up (we always recommend you have a good backup policy) – you can try to use the Terminal after booting off the OS X disk instead of the Disk Utility to build the array without destroying data:You can then reboot and add the second drive to the RAID and kick off the rebuild.. If you do not need more than 500GB of storage you can use that second drive to add redundancy.. RAID stands for Redundant Array of Independent Disks, and there are many levels of RAID configuration.. By mirroring the two drives together you have the ability withstand a drive failure and not lose any data.
